Interuniversity College for Health and Development, Graz/Castle of Seggau, Petrifelderstrasse 4, A-8042 Graz (Austria), contact: campus.at@inter-uni.net

BACKGROUND

Treating pollen allergy (PA) only with conventional medical therapy as for example specific immunotherapy (SIT), cortisone or antihistaminicum doesn't achieve sustained success in long term observation.

OBJECTIVE

An observant study will clarify, whether pollenallergy patients treated with specific immunotherapy (SIT, targeted to immunological stress responses) cortisone, antihistaminicum and CAM treatments as HP50 brought together into a form of Integrative Medicine is more successful related to individuals and can improve the long-term results. See picture 1.

HYPOTHESIS

- 1 High potency homeopathy (HP50) can improve the effect of specific immunological treatment (SIT, cortisone, antihistaminicum)
- 2 High potency homeopathy (HP50) improves and stabilizes the success of treatment more than a one year basis and also to psychological and emotional-functional problems coming from the inner or outer milieu.

METHOD OF MEASUREMENT

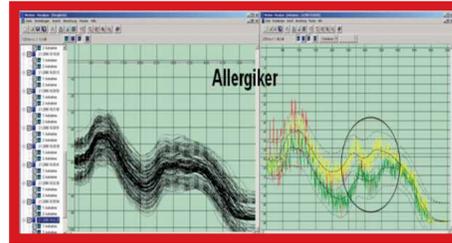

To determine the patient's individual emotional and functional responses and their involvement in the allergy related psycho-social environment the diagnosis system with Voice Frequency Analysis (VFA) by Heinen (2006, 2007, 2008) see picture 2 was applied in addition to sensitivity- and symptom-scores.

TREATMENT METHOD

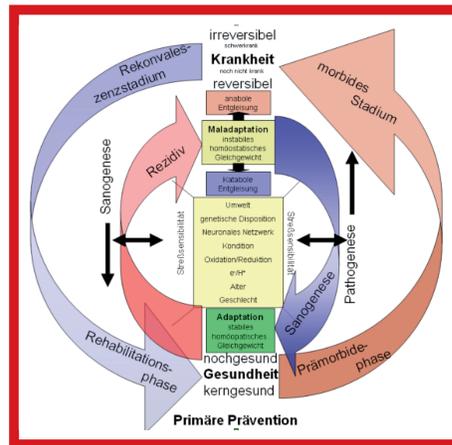

High potency homeopathy C 50.000 (HP50) of individualized drugs. Pepler, A. (2005), Sankaran, R. (2005), see picture 3.

DESIGN OF STUDY

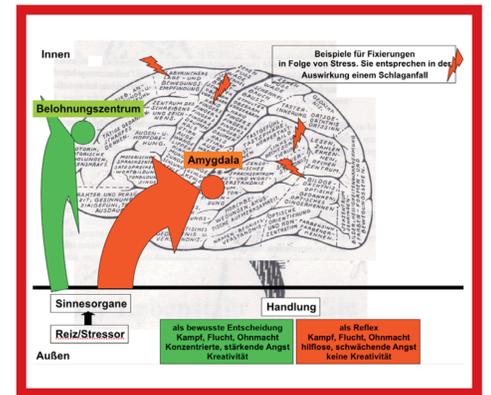

Treatment of 15 patients with pretreatment of SIT and remaining symptoms.

Picture 1 Referring to the anabol and catabol systems which decides the organism turns under the effect of stress into health or disease. The VFA is able to show this processes.

Picture 2 With a specific kind of Fast Fourier Analysis (FFT) two different spectral spectrums/ power spectrums of the voice are brought into a green and yellow curve diagram. The green curve demonstrates the picture of the biological rhythm system of the neural network and the yellow one the biological rhythm system of the structured organism.

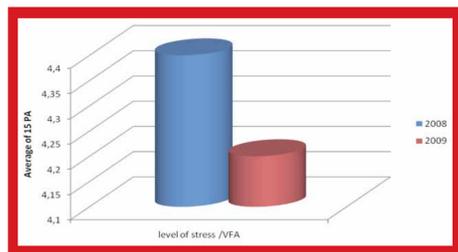

Picture 3 The picture shows the model of how HP50 works clinically: Fixations of the neural network, built up by a conditioned conflict, can appear 7-15 years after the initial trauma as a structural-morphological disease, i.e. for example PA, cancer, rheuma...etc.) The aim of HP50 is to find a solution of the conditioned conflict. Therefore the conflict has to be brought again into conscious by channeling it through the centre of conscious decision (nucleus accumbens, centre of motivation) instead of the centre of fear and flight (Amygdala) (Antonovsky, 1997 and Hüther, G.P. 1999)

RESULTS

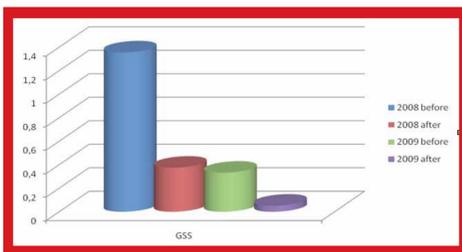

RESULT OF VFA (VOICE FREQUENCY ANALYSIS)

Picture 4 Scientists such as Hüther found out that there are only two intentions in mind of humans: making development – making attachment. The driving power behind both is a fear of existence (Hüther, G. 2008). 'W' means making development (i.e. trying to become free, dissolving old structures, having new ideas, etc.) 'P' means making attachment (i.e. fastening of structure, to bring order into life, make ideas true, etc.). 'W' means dissolving metabolism done by catabolic hormones, 'P' means structuring metabolism done by anabolic hormones. See pictures 7 and 8.

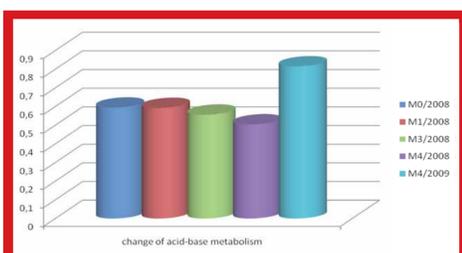

Picture 5 By VFA can be shown the reduction of stress in the neural system and how deeply could be dissolved the fixation/problems by HP50.

Picture 6: The entire symptom-score shows the results 2008/2009 and so a significant correlation for a long term period.

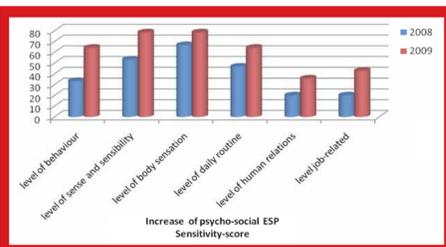

Picture 7 Change of acid-base metabolism in quantity and intensity through the HP50 treatment.

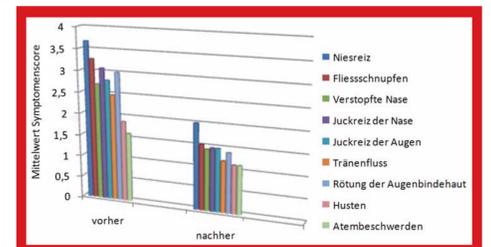

Picture 8 Change of reduction and oxidation process in quantity and intensity through the HP50 treatment.

RESULTS OF SENSITIVITY- AND SYMPTOM-SCORE

Picture 9: The diagram shows the result in 2008 compared to 2009, and the reduction of all symptoms by treatment of HP50.

Picture 10 The diagram shows the increase of psycho-social abilities.

DISCUSSION

The study suggests that the HP50 which, in addition to specific immunological treatments as an Integrative Medicine, concerns:

The patient's individual emotional and functional responses and thereby the entire internal and external milieu of the organism, (neuro-psycho-endocrine-immunology) stabilizes pollen allergy patients on long term basis.

The individualized emotional-functional diagnosis by VFA is an appropriate tool to monitoring the clinically work of HP50 and by this perhaps all other methods of CAM.

The additional attention to individual emotional and functional responses – in the sense of Integrative Medicine – can be of great importance for success in the treatment of pollen allergy patients and of other chronic diseases.

During future studies it would be of interest how far it is possible to prove the high potency homeopathy with changes in the neuronal activity by MRT, PET or EEG.
